

CALFUEL MARINE

Code 8160

CONCENTRATED COMBUSTION CATALYST MULTIPLE ACTION FUEL TREATMENT

DESCRIPTION

Calfuel Marine is a concentrate for economical treatment of heavy fuel oils and marine diesel fuels. Calfuel Marine develops greater diesel engine and boiler combustion efficiency, reducing smoke and soot and reducing fuel consumption. Calfuel Marine controls the problems of sulphur, vanadium and sodium in fuel oil by inhibiting the formation of molten vanadium compound deposits and neutralising the formulation of sulphur trioxide. Calfuel Marine promotes greater cleanliness in burner nozzles, fuel storage tanks, circulating lines, feed pumps, and strainer screens.

BENEFITS

- * Prevents buildup of tank bottom sludge
- * Converts sludge already present to burnable fuel
- * Ensures cleaner tanks, lines, strainers, preheaters and burners
- * Provides more uniform flow of fuel oil to burner for best possible combustion
- * Inhibits corrosion in fuel system
- * Recovers tank capacity with no interruption of plant operations
- * Improves combustion efficiency and fuel efficiency
- * Reduces air pollution by minimizing the discharge of unburned hydrocarbons
- * Minimises residue formation
- * Removes old, built-up residue formations
- * Lower stack temperature
- * Eliminates tube plugging in boilers
- * Prevents corrosion of metal surfaces when using fuels with high vanadium and sulfur content
- * Keeps equipment clean including nozzles, injectors, valves, pistons, tanks etc

DOSAGE

Add to fuel storage tank before refilling. 1 litre of Calfuel Marine to 3000 litres of fuel oil. For initial treatment to remove existing sludge, 2 litres of Calfuel Marine to 3000 litres of fuel is recommended.
